

# FABRICARE ASSEMBLY MANAGER

## SAVE TIME AND MONEY WITH OUR AUTOMATED ASSEMBLY OPTION

Fabricare Assembly Manager (FAM) is a very powerful option for Fabricare Manager that has all the advantages of an automated assembly conveyor at a much lower cost. FAM components include a computer, display, barcode scanner, invoice printer and numbered slots, rails or J-hooks for hanging the orders. FAM is flexible and can be used in a central plant or at multiple locations.

Barcodes are heat-sealed into the clothes at mark-in. When a garment is scanned, the monitor shows (in a large font) the slot number where to hang the garment, while the computer voice calls it out over the speakers or headphones. The screen also displays the customer's name,

the garment's full description, mark-in instructions and a list of the prior invoices completed.

Training for FAM is a snap. The clerk scans the barcode, hangs the garment in the designated slot and – upon seeing/hearing the “order complete” message – removes and bags it. Invoices are printed in the assembly bay when the order is completed.

If you've been considering automated assembly but thought it would probably be too expensive or complicated, let us show you just how reasonable and simple “managed assembly” by Fabricare Manager can be.
